

How to create a hybrid PDF file

1. First, create your document in LibreOffice.
2. Now, from the File menu, select Export as PDF...

3. Check the check-box at the top on the right, "Embed OpenDocument file"
4. Click Export and complete the save process.
5. The PDF you just made will open as normal in PDF readers but will be editable if dragged and dropped on LibreOffice.
6. Now all PDF files you make in LibreOffice will be hybrids until you uncheck that check-box.
